

Name: _____

You are provided the marginal distribution of X and the conditional distribution of Y given X . Your task is to find their joint distribution and the marginal distribution of Y .

$$\begin{aligned}f_X(x) &= e^{-x} & 0 < x < \infty \\f_{Y|X=x}(y|X=x) &= e^{-(y-x)} & 0 < x < y < \infty\end{aligned}$$

1. Find the joint distribution of X and Y , $f_{X,Y}(x,y)$.
2. Find the marginal distribution of Y , $f_Y(y)$.
3. Why doesn't $f_{X,Y}(x,y) = f_X(x)f_Y(y)$?
